

US-PAT-NO: 5929839

DOCUMENT-IDENTIFIER: US 5929839 A

TITLE: Image display control apparatus

----- KWIC -----

US Patent No. - PN (1):  
5929839

Detailed Description Text - DETX (19):

Thus, the embodiment 2 includes the monochromatic display mode in which the color is designated area by area of the image pattern associated with a character or digit, and the multicolor display mode in which the multicolor display is implemented in each area of the image pattern associated with a character or digit, so that the modes are switched in response to the location of the screen. Accordingly, applying the multicolor mode to only the necessary portions makes it possible to reduce the memory size of the display memory RAM 1a and the ROM 2.
